

Long-time experience in building snow-clearing equipment forms the basis of the well-designed one-part snow and levelling scoop "HS". This solid constructed scoop is mainly for usage on access roads, paths and car parks.

standard equipment

- hydraulic side adjustment with 2 cylinders, secured by a double shock valve
- adjustable overload release system
- 4 release springs
- height-adjustable sliding base plates
- high-performance scraping edge made from special low-wear steel – useable on both sides with countersunk screws
- solid side-deflectors
- warning flags

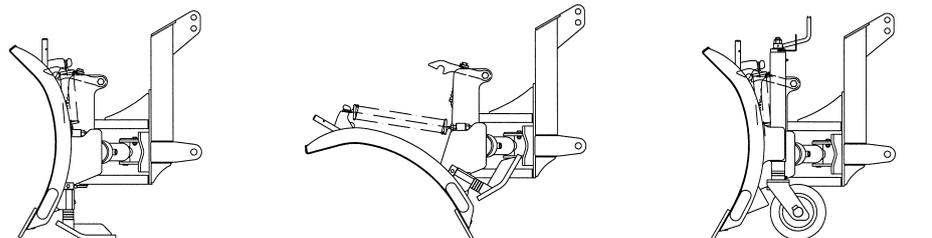

mounting variants

- 3-point linkage
- connection to the quick-change triangle
- quick-change assembly for implements original HAUER-SWE or Euro hook

Optional equipment:

- continuously height-adjustable super elastic wheels, from scoop widths of 2400 mm and over
- rubber-fabric clearing edge
- snow deflector - rubber
- blade heightening 140 mm
- lockable pendulum compensation

Subject to changes in equipment and data during further technical development.

Technical data:

model width	blade height centre / side	clearing width with inclination
HS-2000	750/850 mm	1730 mm
HS-2200	750/850 mm	1900 mm
HS-2400	750/850 mm	2080 mm
HS-2600	750/850 mm	2250 mm
HS-2800	750/850 mm	2430 mm
HS-3000	750/850 mm	2600 mm
